Summary

Graduate researcher in computer science with a background in chemical engineering. My research focuses on quantum and hybrid quantum–classical approaches to operations research problems, employing algebraic and graph-theoretic reformulations. I am broadly interested in computational and engineering applications, including energy and process systems.

Research Interests

Optimization & Operations Research

Combinatorial Optimization, Mathematical Programming, Algebraic Reformulations, Graph-Theoretic Approaches

Quantum Computing & Algorithms

Hybrid Quantum-Classical Methods, Quantum Machine Learning, Quantum Annealing

Applications

Process Systems Engineering, Energy Systems, Complex Networks, Computational Science

Education

MSc in Computer Science *Aug 2023 - Aug 2025*

Universidad Autónoma de Querétaro Querétaro, MEX

- Dissertation on quantum annealing and simulated annealing for discrete-space route optimization.

BSc in Chemical Engineering *Jan 2017 - Dec 2021*

Universidad de Guanajuato Guanajuato, MEX

- Dissertation on modeling and design of intensified distillation sequences for renewable fuel separation.

Experience

Tecnológico de Monterrey *Jan 2025 - Aug 2025*

Visiting Research Scholar | *Supervisor: Dr. Ilse María Hernández-Romero* Monterrey, MEX

- Conducted collaborative research on hybrid quantum–classical neural architectures using variational quantum circuits to model black carbon dynamics, benchmarking performance against classical machine learning methods (*PennyLane*). See [S1].

Universidad Autónoma de Querétaro *Aug 2023 - Aug 2025*

MSc Student Querétaro, MEX

- Developed and evaluated quantum and classical algorithms for discrete shortest-path problems, benchmarking their performance against Dijkstra's algorithm (*Julia*). See [S2].
- Designed and implemented finite automata for encoding alphabetic sequences and performing operations on deterministic finite automata (*Mathematica*).

Ingredion México *Feb 2022 - Dec 2022*

Process Technician San Juan del Río, MEX

- Operated and monitored industrial starch processing systems, performing on-site troubleshooting and real-time adjustments to ensure process reliability.

NOVARES México *Jan 2021 - Jun 2021*

Undergraduate Intern Silao, MEX

- Supported the implementation of health, safety, and environmental (HSE) programs in an automotive manufacturing environment.

Instituto Tecnológico de Villahermosa *Summer 2019*

Visiting Research Scholar | *Supervisor: Dr. Francisco López-Villarreal* Villahermosa, MEX

- Developed a computational interface for vapor–liquid equilibrium calculations in isothermal flash distillation, applying numerical methods to thermodynamic optimization problems (*MATLAB*).

Research Projects

Symmetry Reduction in Combinatorial Optimization *2026*

Available here

- Introductory exploration of symmetry reduction techniques applied to combinatorial optimization problems formulated as integer linear programs, including the shortest path problem, graph coloring, max-cut, and the traveling salesman problem (*Julia, JuMP, HiGHS*).
- Implements lexicographic symmetry-breaking constraints to reduce solution enumeration effort by exploiting graph automorphisms and solution orbits.

Skills

Programming Languages: Python, Julia
Computational Tools & Modeling Frameworks: PennyLane, Qiskit, JuMP, GAMS, MATLAB, Aspen Plus, Mathematica, Jupyter Notebooks.

Languages

Spanish: Native proficiency.
English: Proficient (TOEFL ITP 562 | CEFR B2).
German: Elementary proficiency (CEFR A2).
